#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Mori et al., (Mori), USPAT 5,712,493.
- 3. Mori discloses (col. 6, lines 49-56, 63-64; col. 7, lines 1-9, 25-30, 43-49; col. 8, lines 1-7) and shows in Figs. 1-3, a circuit device comprising:
  - electrode terminals aligned in a plurality of columns along a first direction
     parallel to an edge line of a semiconductor substrate and aligned in a plurality
     of rows along a second direction perpendicular to the first direction; and
  - bumps disposed on the electrode terminal.

Mori also discloses (col. 8, lines 1-7) and clearly shows in Fig. 3, that distances between adjacent two electrode terminals aligned in the second direction are uniform.

#### Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/720,652 Page 3

Art Unit: 2871

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

- 6. Claims 6, 12-14 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mori as applied to claim 1 above.
- 7. As to claim 6, using bumps of different shapes such as pentagon, hexagon, octagon or circle when viewed from an upper side of the bumps is common and within the level of ordinary skill in the art and thus would have at least been obvious to optimize the performance of the device.

As to claims 12-14, Mori does not explicitly disclose that the display device used in his invention is an active matrix type. However, it is common and known in the art to use an active matrix display device for several advantages such as to reduce cross talk. Further, it is inherent for an active matrix display device to have a display area on which a gate line, a data line perpendicular to the gate line and a plurality of pixels are formed and a peripheral area on which electrode pads extended from the gate and data lines, the peripheral area being disposed adjacent to the display area and a driving IC connected to the electrode pads.

Application/Control Number: 10/720,652

Art Unit: 2871

As to claim 17, Mori discloses the use of anisotropic conductive film to connect the drive IC to the display panel.

- 8. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mori in view of Katsuma Endo (Katsuma), JP 64-70727.
- 9. Mori differs from the claimed invention because he does not explicitly disclose that the bump has a rectangular shape when viewed from an upper side of the bumps.

Katsuma discloses a circuit device having electrode terminals and bumps. He further discloses that by forming bumps in rectangular form earthquake-proof property of the device can be improved (abstract).

Katsuma is evidence that ordinary workers in the art would find a reason, suggestion or motivation to form bumps of a rectangular form.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the device of Mori by forming rectangular bumps for advantages such as improve earthquake-proof property of the device, as per the teachings of Katsuma.

### Response to Arguments

10. Applicant's arguments filed on 09/14/05 have been fully considered but they are not persuasive.

In response to applicant's argument that Mori only discloses arranging the terminals as uniformly as possible along the overall periphery of the driving semiconductor element and fails to disclose that the distances between adjacent electrode terminals are uniform, it is respectfully pointed out to applicant that even

though the drawings are not drawn to scale it is clear from Fig. 3 of Mori that the distances between adjacent electrode terminals are in fact uniform.

Therefore, the rejection was proper and thus maintained.

11. Applicant's arguments (see pages 8-10, filed 09/14/05), with respect to claims 1-3, 6, 12-14 and 17 have been fully considered and are persuasive. The rejection of claims 1-3, 6, 12-14 and 17 based on Takenaka has been withdrawn.

#### Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tarifur R. Chowdhury whose telephone number is (571) 272-2287. The examiner can normally be reached on M-Th (6:30-5:00) Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim can be reached on (571) 272-2293. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
